

(Senior) Consultant & Project Manager to work for an international consulting company with focus on sustainability and GHG calculations (f/m/d)

Meo Carbon Solutions is an independent consulting company that supports public and private sector clients worldwide in strategic orientation and implementation of goal-oriented measures towards more sustainable production pathways and ecologically and socially responsible business activities.

The focus of our work is to support our clients from the circular and bioeconomy with the development of corporate sustainability strategies, the calculation of product and company carbon footprints, the implementation of sustainability measures along complex supply chains as well as market and policy consulting. We are also involved in the development and implementation of sustainability standards to ensure sustainable value chains.

At our headquarters in Cologne we are looking for a full-time **(senior) consultant & project manager (f/m/d)** to support our internationally oriented, diverse and dynamic team.

What are your future tasks?

- Management of consulting projects with different contents, e.g. circular & bioeconomy, renewable energy, climate change mitigation, biodiversity, plastic waste & recycling
- Preparation of greenhouse gas calculations and LCAs, data research, analysis & evaluation
- Consulting for the certification of sustainable supply chains
- Implementation of developed concepts and processes together with our customers
- Consulting of international companies, NGOs and governmental organizations
- Support in the marketing & communication of our services to current and future clients
- Support for the further development of our service portfolio in customer management, e.g. for proposals and tenders
- Project management such as scheduling, stakeholder management, documentation and project controlling,
- Participation in client meetings and project workshops
- Execution of company presentations at public national and international events

Who are you?

- PhD, Master or equivalent degree in business administration, economics, natural sciences, life sciences or related field with a thematic reference to topics such as sustainability, environmental and climate protection, etc. (e.g. agriculture, environmental management)
- At least 2 years of experience in: greenhouse gas calculations for international supply chains based on RED methodology, Lifecycle Assessments, emission reporting preferably with GRI Standard

- Additional experience in the following areas are of advantage: circular & bioeconomy, supply chain management, sustainability certification, risk management, remote-sensing technologies
- Professional experience in project management in the mentioned focus areas
- Excellent communication and presentation skills in German and English. Additional language skills are of advantage
- Independent and accurate work, very good organizational skills, team player, reliable person
- Willingness and ability to travel internationally
